Sustainable Strategies for Small Cities and Rural Areas
BUILDING BLOCKS FOR SUSTAINABLE COMMUNITIES

Red Cliff Band of Lake Superior Chippewa, Bayfield, Wisconsin
Next Steps Memorandum

October 13, 2015
INTRODUCTION
The core mission of U.S. Environmental Protection Agency (EPA) is to protect human health and the environment. EPA’s Office of Sustainable Communities (OSC)—or the Smart Growth Office—helps to support this mission by working with communities to reach development goals that create positive impacts on air, water, public health, economic vitality and quality of life for residents. OSC created the Building Blocks for Sustainable Communities program to provide quick, targeted technical assistance on specific smart growth development topics by bringing subject matter experts to communities. Communities request this technical assistance through a competitive application process.

The Building Blocks process is designed to move a community through a process of assessment, convening, and action planning—helping learn about a given topic and create plan to move forward on implementation. The program helps a community identify potential challenges, as well as realize opportunities that already exist to make progress. It includes a series of pre-and post-workshop conference calls, a self-assessment, and an on-site convening of stakeholders to discuss issues, next steps, and actions related to advancing the communities’ specific goals. These efforts help a given community gain a deeper understanding of a particular smart growth issue and identify specific steps necessary to move them closer to implementation. The diagram below outlines the typical flow of the Building Blocks technical assistance program.

THREE STAGES OF TECHNICAL ASSISTANCE (CREDIT: RENAISSANCE PLANNING)
This memo documents the key outcomes of the technical assistance for the Red Cliff Band of Lake Superior Chippewa in Red Cliff, Wisconsin with the Sustainable Strategies for Small Cities and Rural
Areas planning tool. It identifies key community issues, prioritized goals, and specific actions to improve livability, sustainability, opportunities, and quality of life for the people of Red Cliff.

COMMUNITY CONTEXT
A series of treaties between the U.S. Government and the Red Cliff Band of Lake Superior Chippewa Indians (Red Cliff Band) created the Red Cliff Reservation in 1854. The Red Cliff Band is a Native Sovereign Nation, a federally recognized tribe by the U.S. Government. Located at the top of the Bayfield Peninsula and on the shores of Lake Superior at the northernmost tip of Wisconsin, the reservation today is home to 1,266 tribal members and another 571 live nearby off-reservation. The remainder of the 6,879 tribal members live in other, non-local locations. The village of Red Cliff houses the tribal offices and businesses along U.S. Route 13, which connects to nearby Bayfield, Wisconsin – a popular tourist community adjacent to the Apostle Islands National Lakeshore. The area is known for its pristine, natural beauty; and resources related to forestry, hunting, and recreational and commercial fishing. The village of Red Cliff was the primary home to the “Great Buffalo”: head chief of the Anishinaabe, an historical tribal figure, and a peace-broker of the treaty that established the Red Cliff Band and Reservation and eliminated the threat of displacement. 

---

2. Email from the Tribes Enrollment Clerk October 7, 2015
The Red Cliff Band is governed by a nine-member Tribal Council, and the administration is structured into five divisions, including health; education; family and human services; protective and emergency services; treaty and natural resources; and administrative functions. The Tribe currently employs over 300 people and is the largest employer in Bayfield County. By tradition, the Anishinaabe are hunter-gatherers and today, commercial fishing remains a cornerstone of the local economy. The Red Cliff Band was one of the first tribal nations in the United States to create a Natural Resource program. Today, it administers a fish hatchery, and runs programs in water quality, conservation enforcement and wildlife management, solid waste management, and sustainability and climate change. Another local economic engine is the tourism and service industry. Hotels, lodging, and restaurant services account for 20.4 percent of local jobs. Public administration, and education and schools remain the area’s largest employers.

The area is rural and similar challenges to many other rural communities including poverty, limited access to employment opportunities, and a natural-resource-based economy. Bayfield is one of poorest counties in the state of Wisconsin, with a poverty rate of 13 percent, and an unemployment rate, which fluctuates from 7-14 percent due to seasonal variations in the tourism industry. The Bureau of Indian Affairs Labor estimate rates of 40-50 percent unemployment for Red Cliff residents, and 40 percent of all residents are estimated to live below the poverty level. Creating new and adequately paying economic opportunities for Red Cliff residents is a priority for the Tribe.

Red Cliff is growing and there are existing and future housing pressures facing the tribe. The reservation has grown 25 percent since 2010 and, as of November 2014, 65 families were on a waitlist for new housing. The population is expected to increase by another 35 percent by 2020, which would result in the need for at least another 124 new units. Most of Red Cliff’s residents live in one of four housing clusters administered by the Housing Authority. The four clusters are in the southern area near U.S. 13, the Tribal administration offices, and the resort casino. There are opportunities to better connect these housing clusters with destinations as they grow to improve walkability and calm traffic.

5 Source: ESRI Business Analyst, 2015 Infogroup, Inc, from a business summary for NAICS codes for the Bayfield, WI, ZIP code 54814.
7 LOI, November 2014. Red Cliff Housing Authority data.
The Red Cliff Band has a strong connection with the land and is committed to natural resource preservation and conservation both from an economic as well as cultural perspective. These natural resources include about 8,000 acres of forest land (including 2,000 acres of wetlands) and 22 miles of Lake Superior shoreline.

Despite its small population, the Red Cliff Band faces planning and coordination challenges typically found in much larger communities with larger government structures. Funding for new development or projects is often sought and obtained through departments of the Tribal government. As a result, departments often adhere to their own priorities and schedules, often to the detriment of coordinated planning and community engagement. This can make projects disjointed and uncoordinated. Improved cooperation between the departments and programs of the Tribal government is desired.8

In recent years, the Tribe has initiated or completed several smart growth projects that demonstrate their commitment to sustainable practices, a number of which received federal support. These projects include:

- A new Community Health Clinic, funded by the Indian Health Services.
- A recent housing development incorporated passive solar design.
- A multi-use trail through the main corridor of town.
- The Legendary Waters Resort and Casino uses energy efficient retrofits, has improved its stormwater detention ponds with buffers of native grasses and plants, and is along a transit line.
- The Miskwaabeking Transit operates a door-to-door, on-call transportation service for the reservation.

The community planner is also in the early stages of a community-wide comprehensive and long range transportation planning process, both of which hold promise for improving the collaboration and communication challenges. It is in the context of this ongoing progress that the Red Cliff Band, through its Sustainability Program, submitted a Letter of Interest to the EPA OSC for technical assistance to sustain and improve its sustainable strategies for small cities and rural areas.

**COMMUNITY SELF-ASSESSMENT**

EPA contractor Renaissance Planning and EPA staff worked closely with Tribal staff from a number of departments to prepare and plan for an on-site workshop. The range of sustainable strategies for rural and small cities is broad, as are the needs and challenges of the Red Cliff community. In order to identify areas of interest and priority, Tribal staff reviewed eleven topics, identified three priority

---

8 LOI, November 2014. Insufficient community planning and collaboration.
focus areas, and completed the corresponding worksheets. The three topic areas and strategies that were prioritized included:

- **Invest in Efficient Public Infrastructure Systems and Operations**
  - Green infrastructure and low impact development (LID) to manage storm water, including policy changes
  - Street design that incorporates green infrastructure and street trees, e.g., how to do it up front versus later on
  - Composting, salvage, reuse, recycling, construction and other materials

- **Revitalize Village and Town Centers**
  - Landscaping and green infrastructure, street design
  - Multimodal – what is it, why does it matter
  - Wayfinding, signage
  - Enhance the center, explore a Main Street Program.

- **Improve Health and Promote Active Living**
  - Zoning for food, gardening, small animal husbandry and composting (short term)
  - Farmers markets, distribution centers (longer term)
  - Active transportation in new projects
  - Healthy building design standards - what are they, how can they help
  - Health Impact Assessment - what are they, how can they help
  - Public involvement awareness raising, build coalitions and partnerships
  - Create incentives and programs to improve access to healthy food and nutrition.

Though the above list of strategies represents a ‘short-list,’ it still represents an ambitious set of goals and strategies for a 1.5 day workshop. The purpose of the self-assessment was to get some ideas on the table by screening Tribal staff up front, with the understanding that not every strategy identified would be addressed in the action plan that emerged from the workshop. This initial set of strategies simply provided a starting point for conversation amongst members of the community and Tribal elected officials.
During the self-assessment phase, there was some deliberation as to how much time to spend on reviewing and improving the Tribe’s Project and Compliance (PAC). The PAC is a hotly debated topic in the community, with some calling for a streamlining of the code currently under review by the Tribe’s Legal Department. Recognizing that the review and revision of the PAC is a much larger Tribal priority and agenda, demanding a longer and more involved legal process, the local team decided to focus less on the PAC itself, and have more discussion about what kinds of sustainable strategies are desirable for Red Cliff, and perhaps worthy of greater attention in a PAC review and revision process.

The assessment phase concluded after two planning conference calls, and a number of email exchanges. The results of the self-assessment worksheets are included in the appendix of this document.

COMMUNITY CONVENING

Site Tour
The local team organized a driving and walking tour of the Red Cliff core commercial “village” area the afternoon of September 9th. Sites visited included notable community assets, neighborhoods, the new (2012) Red Cliff Community Health Center opposite the Pow Wow grounds, and the Treaty Natural Resources program’s community farm. The tour also included a walk of the picturesque, and relatively new Legendary Waters Resort Hotel and Casino grounds, and the nearby marina and fishing pier. The tour concluded with a drive the city of Bayfield, located about three miles away. Bayfield is a county seat, and is a popular tourist destination. It boasts a marina, ferry service to the Apostle Islands, a Coast Guard station, and numerous retail and restaurants. Children from Red Cliff attend public schools in Bayfield.
Community Workshop

The community meeting and workshop was held in Red Cliff from September 9-10, 2015, at the Legendary Waters Resort and Casino, which also hosts Tribal Council meetings. Day 1 of the workshop began shortly after the site tour. The event was promoted on the Red Cliff website and Facebook pages. Several community members attended, but the group of 10-12 was made largely of Tribal staff and council. A list of workshop participants is included in the appendix of this document.

The Day 1 workshop opened with a ceremony and prayer by Richard LaFernier, wherein he spoke of Anishinaabe’s enduring respect for the earth, water, and sky, and urged workshop participants to listen, and to be mindful and careful when considering the future. The project team then presented a project overview presentation with information related to smart growth in a rural, small town context. The self-assessment was briefly summarized as well. The purpose of the Day 1 meeting was to provide context, answer questions, and get build consensus on values and priorities. It concluded with two group exercises, the first of which was a values-driven exercise called “This I Believe,” wherein everyone in turn states something they believe about Red Cliff and its community. The resulting “This I believe statements” were:

- …we have the capacity to come together
- …we respect, and have a responsibility to protect
- …we have strong minds, a strong sense of earth and respect for the land
- …finances are key
- …we are creative, there is wisdom
- …we need a truly comprehensive plan. If we can define what we like and want, there should be no trouble to make it happen
- …we are good and helpful people who have survived a long time and can learn to thrive
- …we will accomplish something from this effort
- …Red Cliff really wants to see good things happen
- …Once we all agree what needs to happen, it will happen.

The second exercise of Day 1 was a facilitated discussion about challenges, opportunities, and issues that are facing the community. This discussion continued into the morning of Day 2. Day 2 activities also included presentations on topic areas, a luncheon with Tribal Council, and an afternoon brainstorming session on specific next steps strategies and recommendations.

KEY COMMUNITY ISSUES

Throughout the workshop, economic strength, interdepartmental coordination, environmental stewardship, and conservation of tribal culture stood out as top issues for the community. This
section covers some of the highlights of the conversation during the workshop, starting with a summary of the city's strengths.

**Strengths**

Red Cliff has several obvious strengths, including its rich heritage, natural beauty, and plentiful natural resources. The landscape is rich with resources for the tribal community, and also attracts tourism and the funding that comes with it.

- **Culture**: Red Cliff’s culture is strong and very important to the community. Before there were elected forms of government, there were many chiefs whose responsibilities were tied specifically to managing assets and resources, such as fisheries, berry harvest, wildlife harvests, etc. Decisions were made by consensus after considering the resource chiefs’ guidance. Themes of sustainability and connection to the land are part of the cultural traditions in Red Cliff.

- **Natural resources**: Red Cliff has beautiful scenery and productive natural resources that have supported the tribal community for many years. The community farm has good, fertile land and orchards, plentiful fisheries, and acres of forested land. This is not only beneficial to residents, but attractive to visitors.

- **Dedicated staff**: Despite challenges with inter-departmental coordination, much has been accomplished in Red Cliff in recent years. The community has been resolute in its commitment to sustainability, and has received federal funding for a number of recent projects that are completed or underway.

The storied history of the Red Cliff community is a cornerstone of the present-day village, which still has plentiful natural resources and a commitment to self-sustenance.

**Challenges**

A large portion of the workshop was dedicated to exploring the challenges facing Red Cliff. This was an important part of the technical assistance, as it enabled attendees to identify strategies for overcoming them. Some of these challenges fall within the purview of the Red Cliff Band, and can be addressed in the near term. Others, such as amendments to the PAC, will require more time and a broad coalition of partners to make change happen.

- **Fiscal health**: The ability to fund projects is critical to success. New ideas, projects, and concepts may require supplemental funding to the Tribe’s General Fund. New funding sources will need to be identified.

- **Lack of awareness, coordination, or communication**: Many felt that there was an overall lack of interdepartmental coordination, as well as a lack of public awareness related to codes, processes, and planning and development procedures. The community need a communications strategy and better methods of collaborating.

- **Red tape**: Attendees complained of too many hurdles to get things done (e.g. to start a business, or to get building and development projects approved). There was discussion regarding the need for streamlining or revisions of the PAC. Some felt there was a need for more ease, transparency, and flexibility, while others defended existing codes and policy in their ability to ensure quality control, mitigate nuisances, and protect the public good.
Opportunities
The discussion of challenges made way for a focus on opportunities for positive change and continued improvement. Top opportunities described during the workshop included:

- **Local food production and focus on economic resources**: There is a great opportunity to expand on local, natural, and sustainable resources in Red Cliff. The commercial fishing industry has potential to grow, especially if it invests in local, value-added systems. There is also an opportunity for farm demonstration, training, and production that can be replicated and expanded throughout the Reservation. A valued-added meat-processing facility for deer, cattle, and chickens could help employ and feed locals. This opportunity focuses on self-reliance, health and nutrition, and builds local capacity and economic opportunities.

- **Accessibility and safety**: The potential for non-vehicular, or active, transportation received widespread support from the group. A walkability audit, and pedestrian and bike plan improvements were suggested. Improved signage, safer speeds, and controlled crossing points would greatly improve opportunities for biking and walking to local destinations. The Tribe’s Planner referenced the Long Range Transportation Plan, which is looking at biking and walking safety.

- **Improved communications and cooperation**: There are some coordination and communication gaps in the community, both between Tribal programs and with the public in general. There is an opportunity to improve on this as Red Cliff plans new projects.

- **Sustainability in zoning and codes**: This workshop identifies locally-desired improvements and priorities related to sustainability for Red Cliff. The PAC, currently under review, presents an opportunity to reflect these desires in the zoning reform process.

NEXT STEPS
After a robust discussion about strengths, challenges, and opportunities, the project team introduced strategies that other small towns have used to address similar issues. The project team presented strategies that are described in the EPA’s Smart Growth Self-Assessment for Rural Communities. Through the discussion of common strategies, four opportunity areas in particular emerged as the highest priorities for Red Cliff. Not all the details for each table below were completed at the workshop, but some details were drafted and reviewed during follow-up conference calls. In general, the time frames listed below are approximate and dependent on other variables.

### Increase Accessibility, Safety and Mobility
There was unanimous support and approval for enhancing the core of the Reservation’s streets with improved walking and biking amenities. The related mapping exercise, referenced in the appendix of this document, illustrate some of the recommendations made.

## Nurture and Grow the Local Food Economy

The opportunity to grow and expand the local food economy was identified as a key area to focus on. The following actions and next steps were brainstormed by the group during the closing afternoon of the workshop.

Sell fresh white fish to Legendary Waters and at least one other Tribal Casino. | More complex. Need ice machine and willing fisherman. Is a distribution question. Mid to longer-term result following completion of the USDA fish processing feasibility study. | Short to Medium

Develop a program to bring back forest-grown produce. | Encourages both sustainable and culturally linked food and harvesting practices tied to the native landscape and climate. | Short | Natural Resources Staff | Anyone else interested

### Improve Communication and Cooperation

Improving tribal intergovernmental coordination as well as community engagement were cited as both challenges as well as opportunities for improvement during the workshop. The strategies in the table below identify some key next steps or recommendations to make improvements. One overarching suggestion was to fund a full-time tribal communications or community liaison office, or sometimes this is called a public affairs position, that would work to actively assist all tribal outreach and public engagement efforts, as well as actively promote inter-departmental learning and exchange of information. They could attend to and enhance web pages, social media, as well as encourage face-to-face meetings, events. This position could serve as a resource to any department or program that was undertaking an outreach effort.

In general suggestions were made that outreach and engagement efforts should use plain language to clearly explain what happening, why it’s important, what’s at stake, and what can be or should be done. Communicators need to understand that not everyone can read very well, or understand technical language, jargon or lots of acronyms.
